
00 / START HERE

Clear the way.
Collect the coins.

Both paths begin in this state. The order of pin moves changes the outcome.

Black circles = bombs
Gold / grey stars = coins

Three rules to remember

01 **Single-use pin**

Red · disappears after being pulled.

02 **Reusable pin**

Blue · can be moved, then used again.

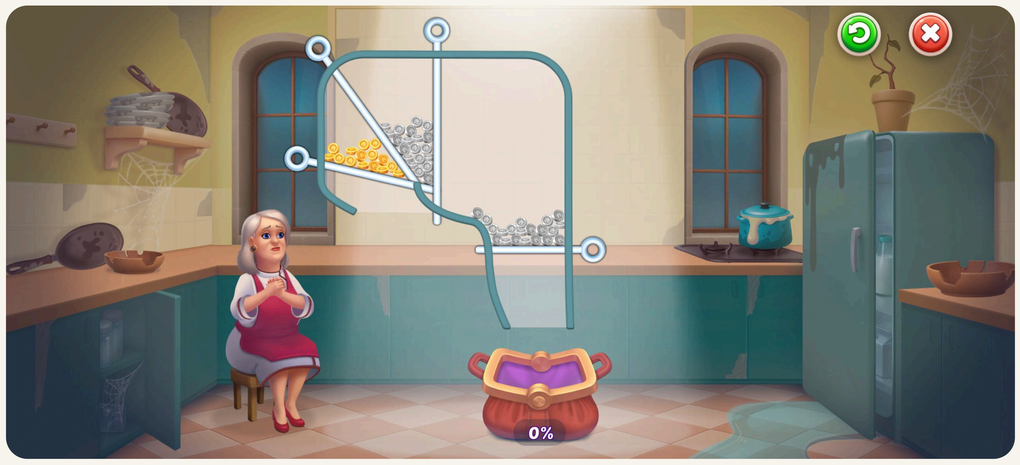
03 **Bomb-locked barrier**

Orange · cannot be moved manually; needs bombs.

GAME DESIGN CASE / ORIGINAL LEVEL CONCEPT

One puzzle.
Two outcomes.

A pull-pin level about timing, irreversible choices, and using the same tool more than once.

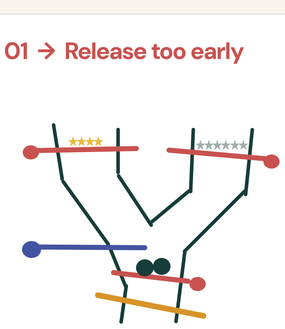


Read left to right · four states after the start

PATH A / FAILURE

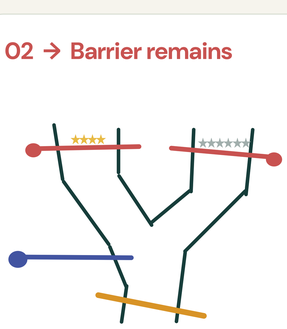
The barrier stays closed

01 → Release too early



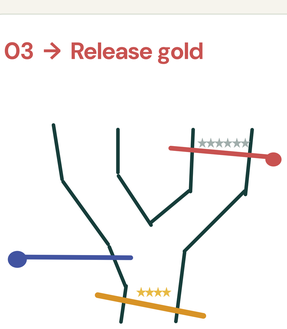
Bombs meet above the lower red pin.

02 → Barrier remains



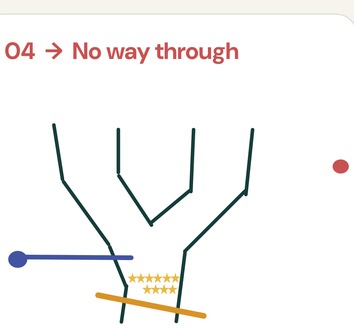
The bombs are gone, but the exit is still blocked.

03 → Release gold



The first coins collect on the orange barrier.

04 → No way through



Both coin groups remain trapped above the exit.

WHY THIS PATH FAILS

The resource is spent.
The obstacle remains.

The bombs are used before the route to the orange barrier is clear. Releasing the coins afterwards cannot fix the blocked exit.

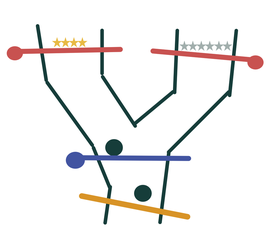
DESIGN FOCUS • Consequences of move order

PATH B / SUCCESS

Open the route, then collect

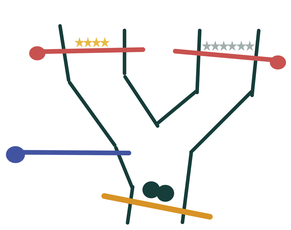
Read left to right · six states after the start

01 → Remove lower red



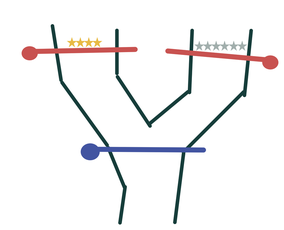
Open the route towards the orange barrier.

02 → Release bombs



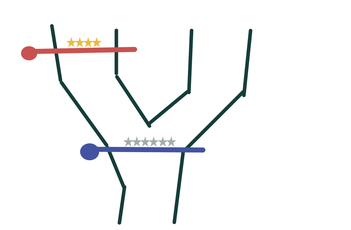
Move the blue pin so bombs reach the barrier.

03 → Reset blue



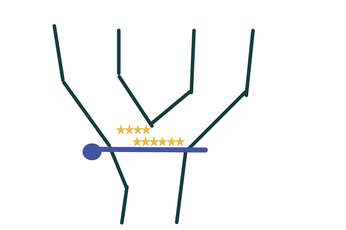
The barrier is gone. Use the blue pin again.

04 → Release grey



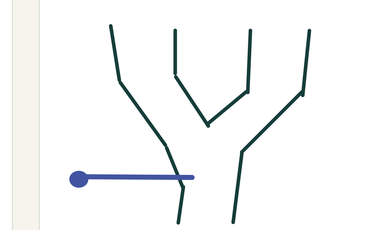
Hold the grey coins above the exit.

05 → Release gold



Bring both coin groups onto the blue pin.

06 → Collect



Move the blue pin again to release the coins.

THE MAIN IDEA

Clear the obstacle before releasing the reward
